                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           d. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq length:

Sequence 4, Application US/09579664B

Patent No. 6514719

GENERAL INFORMATION:

APPLICANT: Immunex Corporation

APPLICANT: Bird, Timothy A.

APPLICANT: Wartin, Unja

APPLICANT: Anderson, Dirk M.

TITLE OF INVENTION: NOVEL MURINE AND HUMAN KINASES

FILE REFERENCE: 2923-A

CURRENT APPLICATION NUMBER: US/09/579,664B

CURRENT FILING DATE: 2000-05-26

NUMBER OF SEQ ID NOS: 36

SOFTWARE: Patentin version 3.1

SEQ ID NO 4

LENGTH: 2902

TYPE: DNA

ORGANISM: Mus musculus

ESULT 4
3-09-949-016-2384
Sequence 2384, Application US/09949016
Sequence 2384, Application US/09949016
Patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

```
; FILE REFERENCE: CL001307

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-270-767-16539
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Réference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID DAOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 16539

LENGTH: 484

TYPE: DNA

ORGANISM: Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Loc

```

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinase 1 (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair myeloid or lymphoid cell deficiencies, wound healing and tissue repair

replacement, burns, incisions and ulcers, periodontal disease

Claim 1; Page 86-87; 106pp; English. for stimulating or suppressing immune

Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseas

responses.

The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CAP) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an CC inhibitor of CAP, and a method of screening for anticancer activity in a CC contacting a tissue sample derived from a cancer cell with an anticancer CC contacting a tissue sample derived from a cancer cell with an anticancer CC drug candidate and monitoring the effect of the anticancer drug candidate con expression of the CAP gene. The CAP proteins are useful for detecting CC cancer associated with expression of a CAP protein in a test cell sample CC and for screening for a bioactive agent capable of modulating the CC cancer, involving determining the expression of a CAP nucleic acid in a crissue. This sequence represents murine CA cDNA of the invention. Note: CC The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO CC at fig.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                     03-AUG-2000;
12-MAR-2001;
28-MAR-2001;
          The invention relates to an AMPK (AMP-activated protein kinase)-related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK stimulates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as increases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted to have insulin-like effects that would enhance the disposal of glucose to have insulin-like effects that would enhance the disposal of glucose
                                                                                                                                                              AMPK (AMP-activated protein kinase)-related kinase, designated SNARK polypeptides and polypuclectides, useful for treating or preventing diabetes, or other disorders of lipoprotein production leading to increased levels of cholesterol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rat; SNF1/AMPK-Related Kinase; SNARK; enzyme; stress response; diabetes; glucose deprivation; lipid metabolism; therapy; lipoprotein disorder;

ននិនិនិនិនិនិនិ
                                                              some type of disorders of lipoprotein production leading to increased levels of cholesterol or triglycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated wit decreased expression of SNARK, such as diabetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purpose or in vitro, for drug screening and related investigational purposes. SNARK antagonists may be administered to increase fuel production, decrease glucose uptake and increase levels of blood glucose in a pati

                                                                                                                                                                                                                                                                                                                                                                                     $
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates CC to a method for treating cancers involving administering to a patient an CC inhibitor of CAP, and a method of screening for anticancer activity in a CC contacting a tissue sample derived from a cancer cell with an anticancer CC contacting a tissue sample derived from a cancer cell with an anticancer CC drug candidate and monitoring the effect of the anticancer drug candidate CC on expression of the CA gene. The CAP proteins are useful for detecting CC cancer associated with expression of a CAP protein in a test cell sample CC and for screening for a bioactive agent capable of modulating the CC cancer, involving determining the expression of a CA mucleic acid in a CC tissue. This sequence represents a murine CA gene of the invention. Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO CC at ftp. wipo.int/pub/published_pct_sequences

Use of modulators of activity of 3700 protein for making medicament e.g., modulating protein phosphorylation or cell signaling, or for treating or preventing cellular proliferative and/or differentiative disorders.
```

for

Claim 28; Fig 1; 115pp; English.

CC The present invention relates to the isolation of a novel human protein CC kinase designated 3700, and the polymucleotide sequence encoding it. The C invention also describes the use of a modulator of the activity of CC protein kinase (PK) 3700 for making a medicament or pharmaceutical CC composition for modulating the ability of a cell to phosphorylate an CC amino acid residue of a substrate protein. Modulators of protein kinase CC 3700 activity are useful for modulating protein phosphorylation, cell CC signalling, tumourigenesis, mitogenesis, transcription of a gene, CC angiogenesis, tissue repair, tissue regeneration, establishment or CC progression of atherosclerosis, and signalling across the blood-brain CC progression of atherosclerosis, and signalling across the blood-brain CC progression of atherosclerosis, and signalling across the blood-brain CC progression, diagnostic targets and therapeutic agents for CC curing PK-related disorders and cellular proliferative and/or CC differentiative disorders and cellular proliferative and/or CC carcinoma, sercoma, metastatic disorders or leukaemia). The 3700 CC golynucleotide sequence can be used to express protein kinase 3700, to CC detect a genetic alteration in a 3700 gene, in chromosome mapping, for CC tissue typing, in forensic biology, and as surrogate markers. The present CC sequence encodes human protein kinase 3700

```
The invention describes an isolated 21910, 56634, 55053, 2504, 15977, CC 14760, 25501, 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, CC 21967, h1983, m1983, 38555 or 593 nucleic acid molecule (I) comprising CC any one of 40 nuclectide sequences (I). The nucleic acid molecules and CC disorder, or a subject at risk of developing a disorder, which is CC associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, CC m1983, 38555 or 593 activity, such as cellular proliferative and/or CC differentiative disorders, brain disorders, patelet disorders, breast disorders, colon disorders, kidney (renal) disorders, lung disorders, covarian disorders, prostate disorders, cervical disorders, spleen CC disorders, thymus disorders, thyroid disorders, skeletal muscle disorders, cc wim (dermal) disorders, pancreatic disorders, skeletal muscle disorders, commune, e.g. inflammatory disorders associated with bone metabolism, CC disorders, metabolic disorders, liver disorders, viral diseases, pain CC disorders, metabolic disorders, neurological or central nervous system CC disorders, (all claimed), e.g. cancer, heart failure, hypertension, cc disorders (all claimed), e.g. cancer, heart failure, hypertension, cc disorders, or asthma. The nucleic acid molecules and collular process, e.g. cell proliferation, differentiation, growth and cc of cellular process, e.g. cell proliferation, differentiation, growth and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-NOV-1999
